Jupyter Python Notebook

- **Benefits of using notebooks**

- rapid prototyping and checking intermediate results
- Suitable for data science coding
- Works out-of-the-box with Anaconda installed Python packages
- Easy to share and publish
- Can include formatted HTML using Markdown documentation inline
- Can convert a notebook to PDF, HTML, and other formats using *jupyter nbconvert* command from the Terminal.

Anaconda Python environment manager

Check python version

```
Anaconda Prompt - python
(base) C:\Users\orasa_pc>python
Python 3.6.4 |Anaconda, Inc.| (default, Jan 16 2018, 10:22:32) [MSC v.1900 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license" for more information.
>>> _
```

Print word

```
Anaconda Prompt - python
>>> print("hello world")
hello world
>>>
```

A screenshot of an Anaconda Prompt window with a black background and white text. The window title bar shows "Anaconda Prompt - python" and standard window controls. The prompt shows the execution of a print statement, which outputs "hello world".

ข้อดีของ Jupyter notebook

สามารถทำงานบน web application

สามารถทำงานบนหลาย platform
ได้แก่ window, MC, unix

CS

Anaconda Python environment manager

องค์ประกอบของ Jupyter notebook

1. Cell สามารถใส่ code หรือ Markdown หรือ hyper link
 - Code –ใส่ code
 - Markdown -ใส่ข้อความหรือบรรยายสมการ
2. ในการเขียน python อาจจะใช้ตัว IDE คือ pycharm เหมาะสำหรับการสร้าง class หรือ package ขึ้นมาใหม่ ตัว ide ก็จะเหมาะกว่า ตัว IDE จะเก็บแค่ code แต่ไม่เก็บตัวผลลัพธ์ เราต้องเขียนโปรแกรมไปเรื่อยๆ มันจะไม่ได้ interactive เหมือนตัว notebook
